What is the Window Stick?

The Window Stick is an adjustable locking security device with a pressure activated alarm at one end. It locks your window closed to prevent unwanted entry. Any attempt to open the window activates the alarm which alerts occupants and deters the burglar before access into your home is gained .

How does it work?

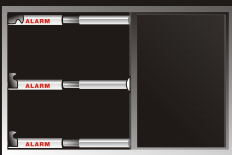

Simply twist the tube to unlock, adjust the size of the Window Stick to fit into your sliding window or patio door frame, then twist to lock again. Now place it into the track of your sliding window.

What size do I need?

Small adjusts 15" to 22" or (38cm - 56cm)
(Fits smaller windows as in kitchens and bathrooms)
Large adjusts 22" to 36" or (56cm - 91cm)
(Fits larger bedroom or living room windows and sliding patio doors)

The Universal Clip & Block Advantage.

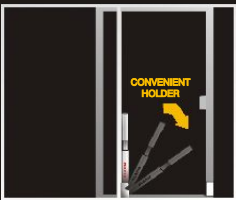

Installed into the window frame this accessory enables the Window Stick to work in other applications such as; vertical sliding, single hung or double hung windows; large custom sliding windows; and, "outside" sliding patio doors. It provides options to mount the Window Stick at the bottom, middle or top of a window or patio door frame, for ease of use, or for child security. Additionally, it makes a convenient holder for the Window Stick while the window or patio door is opened.

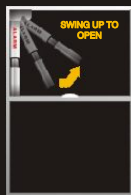

**Options to install:
Bottom, middle or top**

**Large Custom
Sliding Window**

**Outside Sliding
Patio Door**

**Single or Double
Hung Window**
